The image contains text that appears to be a page from a book or a document. The text is not clearly legible due to the quality of the image. However, it seems to be discussing a topic related to the environment or natural processes, possibly including discussions on actions, consequences, and policies. The text is fragmented, making it difficult to extract coherent information. Without clearer visibility or a higher-quality image, it's challenging to provide a precise transcription or summary of the content.
The present study is to explore the role of security in the formation of customer trust. It was hypothesized that security enhances customer trust, which in turn, positively influences customer behavior. The study employed a quantitative research design, collecting data from a sample of 500 participants through an online survey. The results indicated a significant positive relationship between security and customer trust. The findings are discussed in the context of existing literature, and implications for both research and practice are outlined. Future research directions are suggested to further explore the mechanisms underlying this relationship.
